Master Your Personal Finance To Master Your Life Save Money And Get Out Of Debt With Smart Financial Planning, Budgeting And Investing Principles Lets start with hypothetical questions. First, if you are given the freedom to earn the amount of money youve always wanted to earn, how much would it be? Second, how much money would you have been paid for by the time you reach retirement age? Third, how much of that money would have gone to your savings or investment accounts? And fourth, how much of that money would have gone to everything that you owe? Now lets do a reality check. First, how much are you earning now? How different is it from your ideal income? Second, up to your last payroll, how much money have you been paid already? Third, how much of your earnings have gone to your savings account? And fourth, how much money has gone to everything that you owe? Theoretically, the average American would have earned around \$2 million in a lifetime. The question is why there are few people who end up earning their first million. In fact, most Americans barely reach the 100,000 mark when it comes to the assets they have by the time of their retirement. What happened? If you look around, youll know why not everyone manages to emerge as millionaires. Whats supposed to be a million-dollar in earnings is slowly eaten up by debt and other expenses. The cost of living is going nowhere except up the hills, and we have no choice but to keep buying goods that are becoming more and more expensive. This is where the value of savings enters. Although we have been taught at an early age that saving is something good, we were oblivious to its relevance until such time that we grow old and realize how much money we could have saved. Then again, its not too late to recover. For this reason, this book is written. Here Is A Preview Of What Youll Learn In This Book The
