

Vinzenz Bronzins Option Pricing Models: Exposition and Appraisal

In 1908, Vinzenz Bronzin, a professor of mathematics at the Accademia di Commercio e Nautica in Trieste, published a booklet in German entitled *Theorie der Pramiengeschäfte* (Theory of Premium Contracts) which is an old type of option contract. Almost like Bacheliers now famous dissertation (1900), the work seems to have been forgotten shortly after it was published. However, almost every element of modern option pricing can be found in Bronzins book. He derives option prices for an illustrative set of distributions, including the Normal. - This volume includes a reprint of the original German text, a translation, as well as an appreciation of Bronzins work from various perspectives (economics, history of finance, sociology, economic history) including some details about the professional life and circumstances of the author. The book brings Bronzins early work to light again and adds an almost forgotten piece of research to the theory of option pricing.
